A WORK1 WORKING SESSION

Map One *Decision.*

A 30-minute guided exercise to apply our actual Roadmap methodology — decision mapping, risk thresholds, circuit breakers — to one real workflow in your business. Before you ever talk to us.

01	02	03	04
Pick your workflow	Map the decision	Set circuit breakers	Score your readiness

BEFORE YOU START

This isn't content about our methodology. It is our methodology.

Everything on the next five pages is the same framework we use, unpaid, in the first hour of a real Roadmap engagement: find the decision point, map the branches, name the circuit breaker, decide who a machine can trust to act alone and where it needs to stop and ask a human.

We're giving it to you for free because it's genuinely useful on its own — and because the businesses who get the most out of a paid Roadmap are usually the ones who've already tried to do this themselves and found out where it gets hard.

WHAT YOU'LL NEED

- About 30 uninterrupted minutes
- One specific, recurring workflow already in mind — not “improve marketing,” something like “how we approve vendor invoices”
- Permission to be honest if the answer turns out to be “this isn't ready yet” — that's a useful result, not a failed worksheet

STEP 01

01 Pick your workflow

The right candidate is recurring, costs real time, and has at least one moment where a person has to decide something — not just re-type data from one place to another. If you can describe it in two or three sentences, it's specific enough.

The workflow I'm mapping:

How often does this happen?

Who does this today?

Roughly how many hours per week does it cost the team?

IS THIS A GOOD CANDIDATE? CHECK WHAT'S TRUE

- [ ] It happens weekly or more often
- [ ] It involves a real decision, not just data entry or copy-paste
- [ ] It costs the team real, recurring hours — not a one-off task
- [ ] I could describe it clearly in two or three sentences

STEP 02

02 Map the decision

Every workflow has a first moment where someone has to decide something rather than just execute a step. Find that moment. This is the exact structure behind our Decision Trees & Task Matrix deliverable.

EXAMPLE — ILLUSTRATIVE, NOT YOUR DATA

Trigger: New automation request received

Decision: Financial impact over $5,000?

YES
Escalate to Finance Lead — human sign-off required

NO
Proceeds automatically, logged for weekly audit

YOUR TURN

The trigger — what starts this workflow:

The first decision (frame it as a yes/no question):

IF YES →

IF NO →

Is there a second decision hiding inside either branch?

STEP 03

03 Set your circuit breakers

A circuit breaker is a documented stop condition — the specific trigger that pauses the automation and hands it to a named person, before anything goes wrong instead of after. Fill in at least two rows below for the branch you mapped on the previous page.

Can't think of any? That's useful information — it usually means this decision needs more mapping before it's ready to automate.

TRIGGER / CONDITION	THRESHOLD	WHO IS NOTIFIED	WHAT THEY DO

STEP 04

04 Score your readiness

Now that it's on paper, answer honestly. This isn't a test you can fail — a low score just means this workflow needs another pass before it's worth building anything.

	YES	NO
Could I write the decision logic above without help from anyone else?	☐	☐
Would a mistake here get caught quickly, not silently?	☐	☐
Do I have at least one circuit breaker with a named person attached to it?	☐	☐
Does this workflow cost real, recurring time — not a one-off?	☐	☐
Am I the right person to greenlight automating this, or do I need someone else's buy-in first?	☐	☐

WHAT YOUR SCORE MEANS

4–5 yes	This workflow is Roadmap-ready. The mapping you just did is close to where a real engagement would start.
2–3 yes	Close, but map one more layer — usually the second decision or a missing circuit breaker — before building anything.
0–1 yes	This probably isn't the right starting workflow. That's worth knowing before spending money finding out.

BEFORE YOU CLOSE THIS

What this exercise just revealed

However that went, it told you something real. Notice which part was easy and which part made you stop and think — both are useful signal.

Where did you get stuck, if anywhere?

What would you need to know that you don't know today?

If you handed this worksheet to someone else on your team, would they map it the same way?

If most of this came easily: that's a genuinely good sign, and also roughly what the first hour of a paid Roadmap looks like — except across every workflow in your business, not just one, with someone trained to catch the risk you might miss.

If you got stuck: also useful — and exactly what the Roadmap phase exists to resolve before anything gets built.

GET STARTED

See this done properly — across your whole operation.

A Roadmap does exactly what you just did on paper — decision mapping, risk thresholds, circuit breakers — for every workflow worth automating in your business, documented well enough that your team can act on it with or without us.

ROADMAPS USUALLY START AT

$16,000

Based on company size and systems of record.
